FRONT END ASSIGNMENT

Q. Make a react app to make a counter which will start from 0 and 2 buttons with increment and decrement options and count will increase and decrease on the basis of which button.

Ans: • BASIC OBJECTIVES:-

① Create a Redux:- Based Counter App:

- Initial app: 0 (value)
- Two buttons:
  - Increment (+)
  - Decrement (-)
- Count updates based upon button clicks.

* Concepts Used:

- Redux Toolkit (@reduxjs/toolkit)
- React-Redux (useSelector, useDispatch)
- Centralized state Management

* Steps to make the app:

① Install Dependencies:

→ npm install @reduxjs/toolkit react-redux

② Create Redux Store:

→ import { configureStore } from @reduxjs/toolkit;
import counterReducer from '../features/counter/counterSlice';
export const store = configureStore ({

✓The Good Paper

```
    reducer : {
        counter : counterReducer,
    },
});
```

③ Create counter slice:

```
import {create slice} from '@reduxjs/toolkit';
const initial state = {
    value : 0;
};
const counterSlice = CreateSlice ( {
    name : 'counter',
    initial state,
    reducer : {
        increment : (state) => {
            state.value + = 1;
        }
        decrement : (state) => {
            state. value = -1;
        },
    },
});
export const { increment, derement} = counterSlice. actions;
export default counterSlice. reducer;
```

④ Create Counter Component

→

```
import React from 'react';
import {useSelector, UseDispatch} from 'react-redux';
```

```
import {increment, decrement} from './counterSlice';
const Counter = () => {
    const count = useSelector((data) => state.counter.value);
    count dispatch = useDispatch();
    return (
        <div style {{ text Align: 'center'}}>
         <h1 > counter: {count} </h1>
         <button onClick = {() => dispatch(increment())}>
         </btn>
    </div>
  );
};
export default counter
```

⑤ Connect Redux To App:

```
import React from 'react';
import ReactDOM from 'react-dom/ client';
import App from './App';
import {Provider} from react - redux;
ReactDOM.Create Root (document.get Element By Id('root')).
    render( < Provider store = (store)>
        </App>
);
```

Date. ...../...../.....
Page No. .....

⑥ Use Counter in App:-

```
import counter from './location';
function App() {
        return (
            <div>
                <counter/>
        </div>
);
}
```
