Q1) What is Figma ?

Ans. Figma is a cloud based UI/UX design tool used to design user interfaces for websites and mobile application. It allows designers, developers, and product teams to work together on the same design file in real time. Since Figma runs in a web browser, there is no need for heavy software installation. It supports designing, prototyping, and developer handoff on a single platform. Due to its ease of use and collaboration features, Figma is widely used in modern UI/UX design.

Key Points :-

- Cloud based and browser-friendly tool.
- Supports real-time collaboration.
- Automatically saves our work.
- Works on all operating System.

Q2) Differentiate between Designing and prototyping in Figma.

Ans. Designing in figma focuses on creating the visual appearance of an application or website. It includes placing UI elements such as buttons, text, icons and colors.

Prototyping focuses on adding interactions between screens. It shows how users will move from one screen to another. Designing is static, while prototyping is interactive and helps in testing user experience.

Q3. What are Components and styles in Figma?

Ans. Components and styles in figma are used to maintain consistency across a design project. A component is a reusable UI element such as a button or navigation bar.
Styles define design properties like colors, fonts, and text sizes. When a component or style is updated, all its instances update automatically. This makes large projects easier to manage and saves time.

- Components are reusable design elements.
- Styles define colors, fonts, and text formatting.

Q4. Explain Auto-layouts in Figma.

Ans. Auto layout is a feature in figma that helps create ~~s~~ responsive and flexible designs. It automatically adjusts spacing, padding and alignment when content or screen size changes. This is especially useful for buttons, cards and lists. Auto layout ensures that designs adapt well to different screen sizes. It also makes the design easier for developers to implement.

Q5. Describe the complete developer handoff process in figma.

Ans The developer handoff process in figma allows designers to share finalized designs with developers efficiently. Developers can use inspect mode to view exact measurements, colors, fonts, and spacing. Assets like icons and images can be exported easily. Figma also provides automatic CSS, Android and ios code snippets. This reduces communication gaps and speeds up development.

Key Points:

1. Easy sharing of design files
2. Inspect mode shows exact design details
3. Assets can be exported quickly
4. Provides code snippets for developers.
5. Reduces errors and speeds up development.
